Governed systems. Visible outcomes.

Pricing governance, inventory automation, data quality, and release readiness - translated into measurable operating value.

Brian Lloyd

Senior Business Systems Analyst

EXECUTIVE OUTCOME

Governance created measurable operating leverage.

Controls were designed around margin protection, capacity, inventory turns, and trusted reporting.

22%

fewer pricing disputes

After tier controls, range validation, and exception routing.

~120

hours reclaimed weekly

Automation reduced manual price maintenance and reconciliation.

28%

less slow-moving inventory

Demand velocity and Days-of-Supply controls improved turns.

120+

SKUs mapped across governed pricing tiers

36%

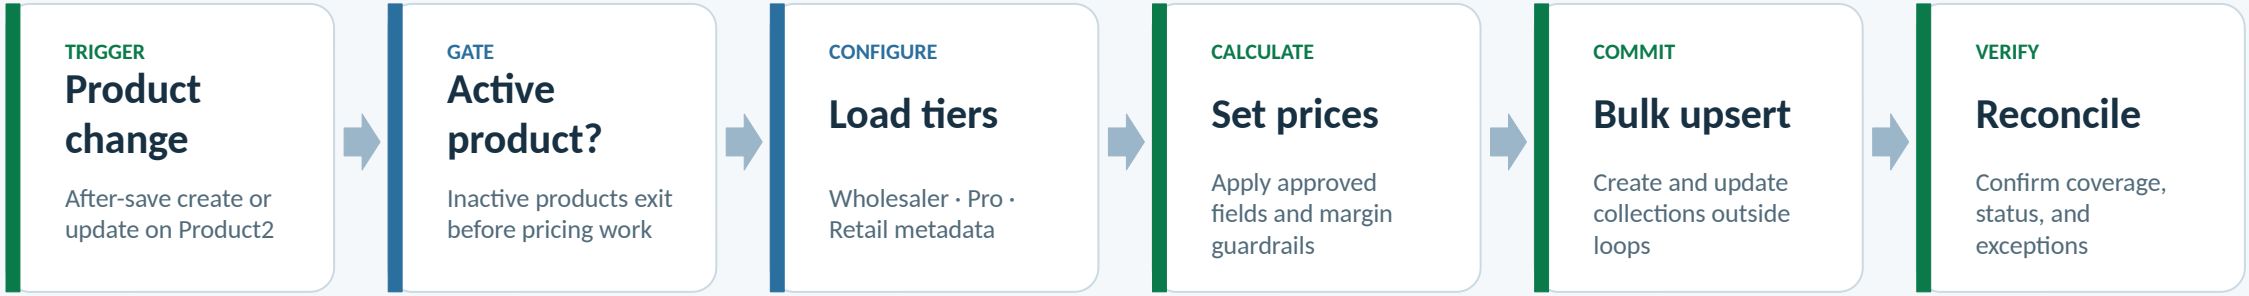

of unit demand concentrated in top SKUs

Daily

pricing and order controls

Pricebook automation replaced manual tier maintenance.

A bulk-safe record-triggered pattern creates or updates tier entries, reconciles outcomes, and logs faults.

Control architecture

Configuration	Custom metadata removes hardcoded tier names
Scale	Collections prevent DML inside loops
Audit	Reconciliation confirms expected PricebookEntries

Fault path

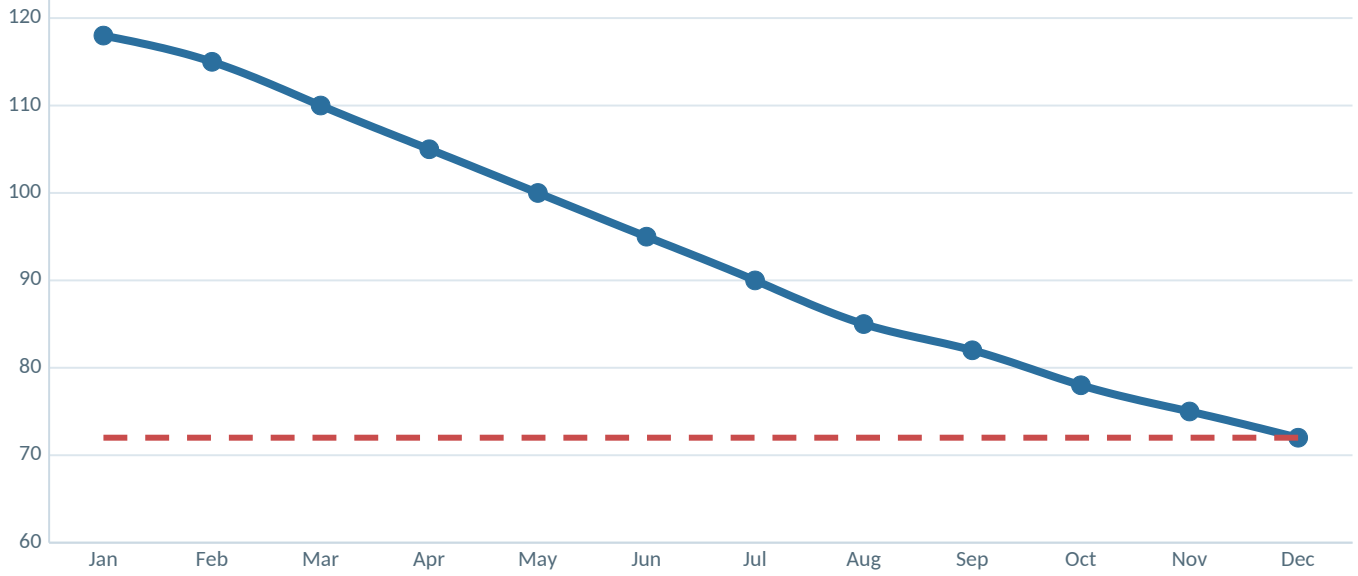

Flow_Error_Log__c

Record · interview · user · fault context

Governance tracked disputes against an explicit ≤72 target.

The 30-day rolling count connects standardized SKU data, governed markups, approval routing, and executive targets.

Monthly price disputes — 30-day rolling count

120 baseline → ≤72 target | 40% reduction target

Documented portfolio outcome: 22% fewer pricing disputes.

Governed tier model

Price Book	Markup	Control
Wholesaler	15%	Range check
Professional	25%	Approval
Retail	40%	Audit trail

Leadership value

Margin protection · fewer escalations · faster order processing

Demand signals became governed replenishment actions.

A family-level data model connects SKU demand, velocity, Days of Supply, decision zones, and operational tasks.

Data model

Inventory_Family__c — Master-detail relationship

Product2 · reorder point · safety stock · velocity · Days of Supply

Operating rhythm

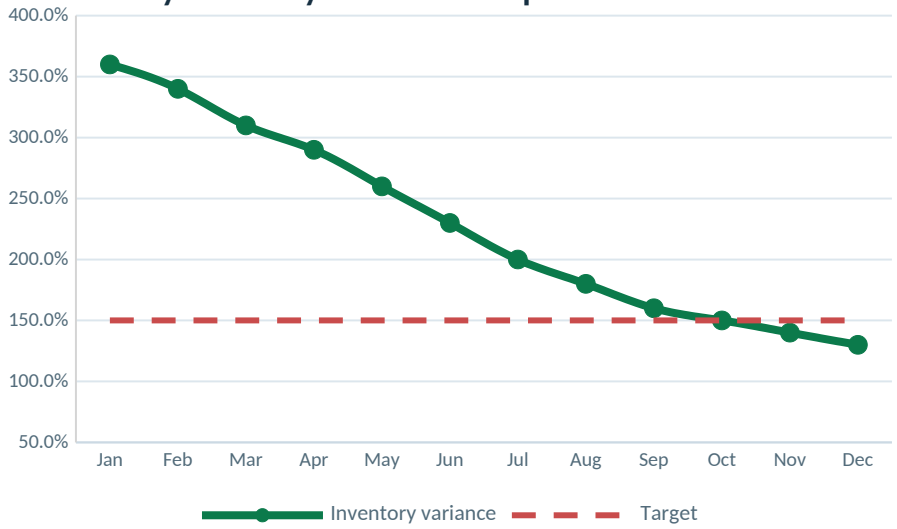

Daily	Low-DOS flags and tasks
Weekly	Replenishment review
Monthly	Executive turnover reporting

PROJECT 02 | MEASURED IMPACT

Days-of-Supply controls reduced slow-moving inventory by 28%.

Demand concentration, variance targets, and control zones gave planners a consistent method for balancing stockout and overstock risk.

Monthly inventory variance — top 500 SKUs

Days-of-Supply decision zones

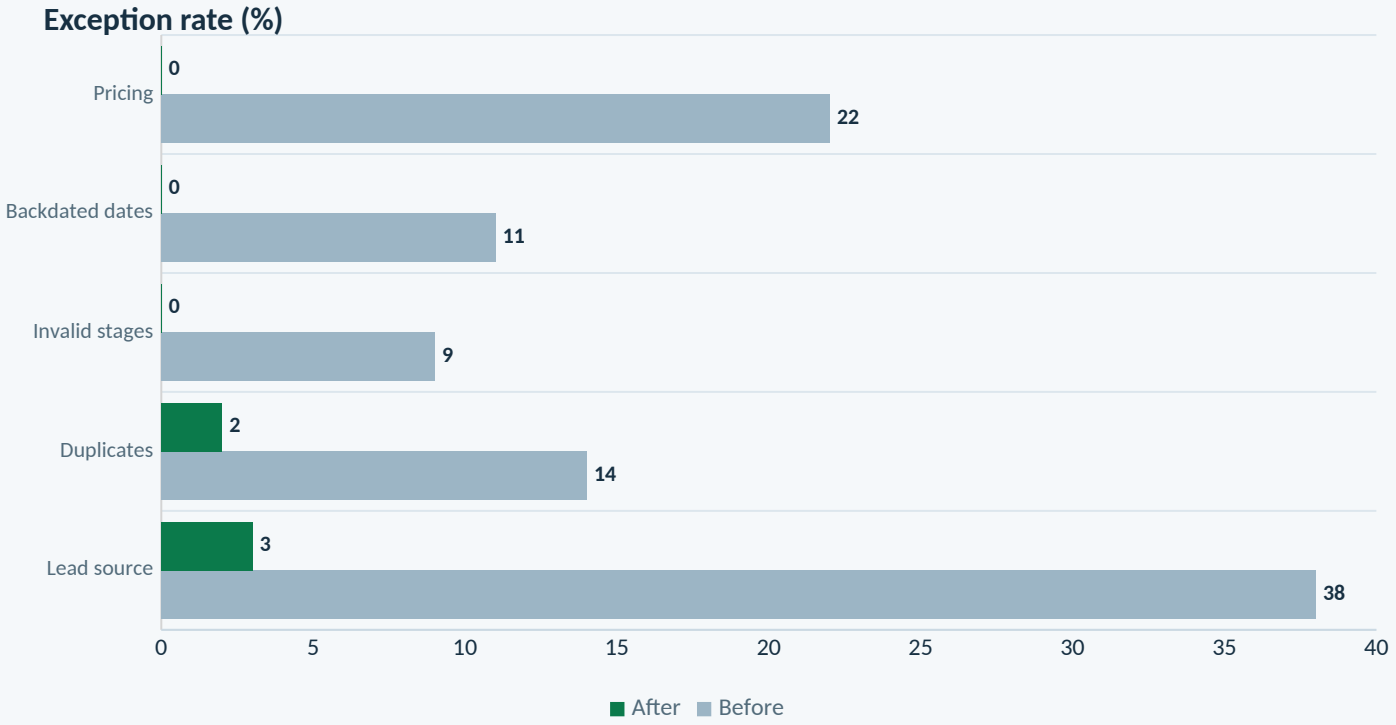

0–14 Urgent	Create replenishment task
15–30 Watch	Review demand and lead time
31–60 Balanced	Maintain governed coverage
60+ Slow	Evaluate promotion or reduction

28% **reduction in slow-moving inventory**

Top SKUs represented ~36% of unit demand.

Data controls made forecasting and AI use more reliable.

Validation, duplicate management, stewardship, and audit design reduced preventable exceptions at the point of entry.

Control stack

1 Validation

Stage, date, amount, and pricing guardrails

2 Matching

Exact email + name/phone comparison

3 Stewardship

Merge log, owner, reason, and audit trail

4 UAT

Standard, bypass, bulk, and fault coverage

Outcome: cleaner forecasts, reporting, and AI inputs

Actual Salesforce formulas, illustrated.

Red highlights the condition that blocks the save. Green highlights the approved permission bypass.

Price range guard

Opportunity_Product_Price_Range_Check

```
AND(
  ISCHANGED(UnitPrice),
  NOT($Permission.Pricing_Override),
  NOT(ISBLANK(
    PricebookEntry.Min_Approved_Price__c)),
  NOT(ISBLANK(
    PricebookEntry.Max_Approved_Price__c)),
  OR(
    UnitPrice <
      PricebookEntry.Min_Approved_Price__c,
    UnitPrice >
      PricebookEntry.Max_Approved_Price__c
  )
)
```

SAVE BLOCKED

Unit price must remain within the approved range.

Protect margin

Closed stage lock

Opportunity_Closed_Stages

```
AND(
  ISCHANGED(StageName),
  OR(
    ISPICKVAL(PRIORVALUE(StageName),
      "Closed Won"),
    ISPICKVAL(PRIORVALUE(StageName),
      "Closed Lost")
  ),
  NOT($Permission.Opportunity_Manager)
)
```

SAVE BLOCKED

Closed Opportunities require manager permission to reopen.

Preserve forecast history

Close date guard

Opportunity_Closed_Backdate

```
AND(
  ISCHANGED(CloseDate),
  CloseDate < TODAY(),
  NOT(IsClosed),
  NOT($Permission.Opportunity_Manager)
)
```

SAVE BLOCKED

Open Opportunities cannot use a past Close Date.

Protect forecast timing

UAT and change governance made releases safer.

Fifty-two test designs connect business-critical scenarios to evidence, approval gates, monitoring, and rollback decisions.

UAT coverage matrix

Control	Standard	Negative	Bulk	Approval	Rollback
Price Book maintenance	●	●	●	●	●
Price exception workflow	●	●	●	●	●
Inventory DOS controls	●	●	●	●	●
Duplicate management	●	●	●	●	○
Validation rules	●	●	●	●	●

● Designed coverage ○ Not applicable

CAB release gates

1. **Approve scope**
   Owner, risk, and acceptance
2. **Validate evidence**
   UAT results and rollback test
3. **Deploy & monitor**
   Change window and alerts
4. **Accept or rollback**
   Threshold-based decision

Rollback triggers remain measurable and explicit.

SCALE PLAN

A 90-day roadmap scales the operating model.

The sequence establishes a baseline, strengthens control design, automates repeatable work, and embeds adoption.

DAYS 0–15

Baseline

- Confirm objects and owners
- Audit pricing and inventory
- Set measures and thresholds

DAYS 16–35

Govern

- Finalize tier metadata
- Define DOS zones
- Approve UAT and rollback

DAYS 36–65

Automate

- Deploy flows and controls
- Run reconciliation
- Monitor exceptions

DAYS 66–90

Scale

- Train users and stewards
- Publish executive dashboards
- Measure adoption and value

Governance thread

Business owner → Salesforce administrator → Finance reviewer → Data steward → Release manager

Every phase produces evidence, a decision, and an accountable next owner.

Built to scale across pricing, inventory, and revenue operations.

The throughline is governance: clear data models, automated decisions, tested controls, trained users, and measurable operating value.

CORE CAPABILITIES

Salesforce administration · Flow Builder · Price Books · Data governance · UAT · Change enablement
