Flow Change Notes

Pricing governance and automation release

Work sample context: Sanitized professional work sample documenting Brian Lloyd's applied skills and experience. Organization-specific identifiers and confidential data have been removed.

Release summary

Introduces governed automation for tier Price Book maintenance and Opportunity Product price exceptions, supported by validation, fault handling, UAT design, and user enablement.

Delivered capabilities

Capability	Operational change
Price Book Entry automation	Creates or updates governed tier entries when Product pricing changes.
Price exception workflow	Documents and routes out-of-range pricing for approval.
Validation controls	Protects approved ranges, closed stages, and open-Opportunity Close Dates.
Fault monitoring	Captures automation errors with record and interview context.
Enablement	Provides SOPs, quick references, UAT scripts, and release guidance.

User impact

- Pricing and Sales users receive clearer exception guidance.
- Finance gains more consistent margin and pricing controls.
- Operations spends less time reconciling tier prices manually.
- Leadership receives more dependable reporting and governance evidence.

Release sequence

- Validate configuration and permissions.
- Execute unit and UAT designs in a controlled environment.
- Deploy metadata during the approved change window.
- Activate automations only after configuration validation.
- Run reconciliation and monitor faults.
- Publish user communications and support guidance.

Rollback approach

- Deactivate new Flows and validation controls.
- Restore the prior metadata version.
- Reconcile affected Price Book Entries from the approved backup.
- Communicate status and document the cause before redeployment.
