Quick Reference Guides

Pricing, approvals, duplicate stewardship, and validation support

Work sample context: Sanitized professional work sample documenting Brian Lloyd's applied skills and experience. Organization-specific identifiers and confidential data have been removed.

Guide 1: Update governed Product pricing

- Open the Product and confirm the SKU, COGS, MSRP, and active status.
- Enter the approved wholesale, professional, and retail tier prices.
- Save the Product; automation maintains the configured Price Book Entries.
- If an error appears, confirm configuration and review the Flow error log.
- Use the reconciliation report to confirm SKU coverage.

Guide 2: Submit a pricing exception

- Enter the requested Opportunity Product price.
- If it falls outside the approved range, provide the business justification.
- The system creates and routes a price-exception request.
- Monitor the approval status on the parent Opportunity.
- After approval or rejection, follow the notification and required action.

Guide 3: Resolve a potential duplicate Contact

- Review the duplicate warning and compare email, last name, first name, and phone.
- Select the master record with the most complete and reliable information.
- Merge only with authorized data-steward access.
- Record the reason and verify related records after the merge.
- Escalate uncertain matches rather than forcing a merge.

Guide 4: Respond to a validation error

Message type	User action
Price outside approved range	Use the pricing-exception process or request an authorized override.
Closed Opportunity stage locked	Request manager review; do not reopen by changing the stage.
Past Close Date on open Opportunity	Correct the date or request approved manager assistance.
Potential duplicate Contact	Review the match and follow the steward process.

Support escalation information

- Include the record URL, time, action attempted, and exact error text.
- Do not include confidential customer data in general communication channels.
- Route system faults to the Salesforce administrator with the Flow error-log reference.
