EXECUTIVE CAREER PORTFOLIO

Governed systems. Visible outcomes.

Business systems leadership at the intersection of strategy, Salesforce governance, revenue operations, data stewardship, and adoption.

Brian Lloyd

SENIOR BUSINESS SYSTEMS ANALYST / SALESFORCE PLATFORM ADMINISTRATOR
GTM SYSTEMS & REVENUE OPERATIONS / CONSHOHOCKEN, PENNSYLVANIA

EXECUTIVE PROFILE

Trusted advisor to business leadership. Salesforce is the toolbox.

I translate leadership intent into controlled, measurable operating systems. My method makes the decision explicit, maps it to the right platform control, validates the change with evidence, and leaves behind accountable ownership.

120 hrs
PER WEEK
Capacity reclaimed through governed automation

22%
REDUCTION
Fewer pricing disputes after standardization

20+
WORKFLOWS
Record-triggered automations governed and validated

50+
USERS
Enabled through role-based adoption support

OPERATING PRINCIPLE

Evidence before configuration. Ownership before scale. Outcomes after release.

Core capabilities: revenue operations / Salesforce governance / process architecture / data stewardship / change adoption / executive communication

BUSINESS SOLUTION PORTFOLIO

Four systems stories. One repeatable leadership method.

Every story follows the same executive logic: problem, stakeholders, analysis, solution selection, technical control, operational use, measurable result, leadership value, and long-term success.

01

Pricing governance

22% fewer pricing disputes

Standardized SKU, COGS, margin, tiered Price Books, validation, and approvals.

02

Workflow automation

~120 hours/week reclaimed

20+ record-triggered flows, approval routing, UAT, release evidence, and training.

03

Data quality

~30% duplicate reduction

Matching, controlled merge, validation, task controls, and stewardship evidence.

04

Enablement & adoption

25+ operating guides

Role-based SOPs and quick-reference guides supporting more than 50 users.

REVENUE CONTRIBUTION MAP

How the implemented solutions helped generate revenue.

The platform work reduced selling friction, created client-serving capacity, improved customer decisions, and sustained consistent execution.

01 PRICING GOVERNANCE

Sell with consistency

Tiered Price Books, standardized SKUs, and approval controls helped teams present, approve, and fulfill offers with less pricing friction.

Revenue generation + margin discipline

02 WORKFLOW AUTOMATION

Create client capacity

Automated routing and follow-up reclaimed approximately 120 hours weekly for client delivery, selling, service, and account growth.

More revenue-producing capacity

03 DATA QUALITY

Act on trusted demand

Cleaner customer, pipeline, and activity data improved follow-up, revenue visibility, and the ability to convert and retain business.

Conversion and retention support

04 ENABLEMENT & ADOPTION

Sustain the model

SOPs, quick-reference guides, and training helped more than 50 users execute the revenue workflow consistently at scale.

Repeatable revenue execution

ATTRIBUTION STATEMENT

These solutions are contributing operating mechanisms that helped generate revenue. The $12.5M retained operating result reflects the full client volume and is not allocated to any single Salesforce control.

BUSINESS CASE 01 / REVENUE GOVERNANCE

Pricing governance & SKU standardization

MEASURED RESULT

22% fewer dispute

PROBLEM

Pricing lived across manual spreadsheets, inconsistent product records, and informal approvals - creating margin risk, rework, and customer friction.

WHO WAS AFFECTED

Sales, Finance, Operations, platform administrators, and customers all absorbed the impact of inconsistent pricing decisions.

ANALYSIS

Mapped the pricing lifecycle, reviewed exception patterns, compared SKU and cost data, and isolated the controls required at quote, approval, and fulfillment.

WHY THIS SOLUTION

Salesforce Price Books plus a governed SKU master created a common source of truth while preserving Wholesaler, Professional, and Retail tiers.

TECHNICAL IMPLEMENTATION

Standardized SKU, COGS, and margin fields; configured tiered Price Books; built validation, record-triggered flows, approval routing, and operating procedures.

OPERATIONAL USE

Business owners approve scope, Finance validates margin, the administrator deploys controls, and Operations monitors exceptions.

LEADERSHIP VALUE

Leaders gained visible decision rights and an evidence trail without slowing the business.

LONG-TERM SUCCESS

The reusable pricing-control pattern supports future launches, channel growth, and margin reviews.

BUSINESS CASE 02 / OPERATING LEVERAGE

Workflow automation & capacity reclamation

MEASURED RESULT

~120 hours weekly

PROBLEM

Manual updates, routing, and follow-up tasks consumed specialist capacity and made service levels dependent on individual workarounds.

WHO BENEFITED

Customer-facing teams regained time while managers received a consistent view of ownership, completion, and exceptions.

ANALYSIS

Documented high-volume activities, quantified effort, traced failure points, and prioritized automations by value and control risk.

WHY THIS SOLUTION

Record-triggered flows and approval routing removed repetitive work while keeping exceptions visible and accountable.

TECHNICAL IMPLEMENTATION

Built more than 20 flows, defined entry criteria and exception paths, completed UAT, documented changes, and delivered role-based training.

OPERATIONAL USE

Teams work from routed tasks and exception queues; administrators monitor failures; business owners review capacity outcomes.

LEADERSHIP VALUE

Returned time to revenue-generating and customer-facing work with a measurable operating-capacity story.

LONG-TERM SUCCESS

A governed flow inventory and testing discipline make future automation safer, faster, and maintainable.

BUSINESS CASES 03 + 04

Decision integrity depends on data quality - and adoption.

DATA QUALITY & GOVERNANCE

~30% duplicate reduction

PROBLEM

Duplicate records, inconsistent required fields, and weak task controls reduced forecast trust.

CONTROL MODEL

Matching rules, controlled merge practices, validation rules, and due-date controls.

EVIDENCE

Data profiling, root-cause classification, controlled remediation, and 20+ UAT scenarios.

LONG-TERM VALUE

Scalable stewardship replaces recurring cleanup projects.

ENABLEMENT, SOPS & ADOPTION

25+ operating guides / 50+ users

PROBLEM

Platform value was at risk without role-specific guidance and reinforcement.

CONTROL MODEL

Concise SOPs, quick-reference guides, demonstrations, and release support.

EVIDENCE

Role analysis, high-risk task mapping, training feedback, and adoption support.

LONG-TERM VALUE

Faster onboarding, lower support dependency, and preserved institutional knowledge.

Financial evidence, placed in operating context.

Revenue is a supporting outcome in the broader systems story - not the portfolio headline.

CALCULATED FROM ACTUALS

$12.5M

retained operating revenue

31,200 client engagements
200 per week x approximately 156 weeks

Uses $400.97 retained value per engagement after operating costs and a 35% reserve.

MEASURE	VALUE	CLASSIFICATION
Weekly baseline	**200 engagements**	Historical operating baseline
Operating period	**Approx. 156 weeks**	June 2022 - July 2025
Total volume	**31,200 engagements**	Calculated from actual volume
Retained value	**$400.97 / engagement**	After costs and 35% reserve
Retained revenue	**$12,510,326**	Calculated from actuals

ATTRIBUTION GUARDRAIL

Wholesale, reseller, private-label, salon-owner, and other commercial-account revenue is excluded and held separate to prevent duplicate attribution.

GOVERNANCE OPERATING SYSTEM

Baseline -> Govern -> Automate -> Scale

Every phase produces evidence, a decision, and an accountable next owner.

01 DAYS 1-30

BASELINE

Map the value stream, quantify friction, profile data, and agree the evidence baseline.

Owner: business sponsor

02 DAYS 31-45

GOVERN

Define decision rights, controls, exceptions, measures, and acceptance criteria.

Owner: Finance + platform

03 DAYS 46-75

AUTOMATE

Configure, test high-risk scenarios, enable users, and prepare release evidence.

Owner: release manager

04 DAYS 76-90

SCALE

Monitor outcomes, stabilize adoption, transfer ownership, and prioritize next value.

Owner: accountable operator

GOVERNANCE OWNER CHAIN

Business owner -> Salesforce administrator -> Finance reviewer -> Data steward -> Release manager

Platform depth, strengthened by an active practitioner network.
